

MANAGING MARINE CHANGES

Course aim and objectives: This course provides participants with knowledge for controlling and managing effectively changes which are inevitable in the contemporary marine business environment. Essential, prior to implementing any change, is the risk assessment process as a tool safeguarding the integrity of the system, operational efficiency, and continual improvement. The step-by-step approach, for managing marine changes without affecting operational safety, is thoroughly explained. Reference is also made to OCIMF's TMSA Element 7 best practice guidance

Course main elements:

- Introducing and defining Management of Change process
- Managing changes and risk controls
- Process approach to managing marine changes
- Change initiators, reasons and need for changes
- Implementation of management of change process
- Change factors compromising the integrity of the system
- Best practice guidelines for continual improvement
- Practical workshops and exercises

Course participation: The course is open to shipping company corporate operations, technical, quality, safety, environmental, purchasing and claims managers, superintendents, masters, and senior shipboard team members involved in the effective management and implementation of changes as a tool for incident prevention and continual improvement
